

WhoDoes 2.0

Plan and manage activities in a simple and collaborative way.

Brescia (Italy) – May 13, 2008 - GotThingsDone.com presents [WhoDoes 2.0](#) the new and completely renewed version of the web-based application for collaboration of activities and the co-ordination of the team.

WhoDoes 2.0 Introduces new instruments that makes managing of the projects activities and the sharing of information within the team even easier, a new graphical user interface more intuitive making it more usable and a new approach more collaborative to facilitate team work.

The new version of **WhoDoes** enables you to plan projects in just a few minutes thanks to the introduction of [Fast Planning](#), a new interface ideally making planning of activities easier.

The new **WhoDoes 2.0** graphical interface allows you to simply manage the activities that need to be done, quickly assign tasks to team members, define due-dates, set priorities and always keeping the project's progress under control.

Utilizing the diverse integrated instruments in a unique online application, allowing you to collaborate and communicate easily with all team members, working in the same of office or distributed around the world.

Onside the new **Repository** it is now possible to archive and share not only project documents but all the communication done relative to the project that is normally sent via e-mail. Thanks to the new functionality [Project E-mail](#) it will be possible to centralize within a unique shared archive all the information contained in the e-mail, allowing the whole team to remain completely updated with the communication relative to the project.

WhoDoes 2.0 introduces a new extended **teamwork** concept that will allow you to invite all the users that form part of the [WhoDoes Network](#) to participate to the projects, it will actually be possible to invite all the people that use WhoDoes and have chosen themselves to be visible within the Network. It will be even easier to assign projects to resources of the company: all the users with the same company email domain address can be assigned directly without having to follow the invite procedure.

Main characteristics:

- **Web-based:** web-based application developed in Ruby on Rails compatible with all common web browsers.
- **Localization:** WhoDoes 2. Is available in English, Italian and Spanish
- **Simple design and easy to use:** Using a simple and intuitive interface such as Fast Planning helps to noticeably reduce the time necessary for project planning.
- **Time Management:** thanks to an opposite calendar the team members can keep track of the hours spent on single activities, sharing this information directly with the project manager.
- **Unlimited users:** it does not matter how big the project team will be, WhoDoes foresees the management of an unlimited number of users active at the same time.
- **More projects, only one account:** only one WhoDoes account, which allows you to manage up to a 100 projects.
- **Shared documents:** inside the Repository it is possible to archive and share up to 10Gb of documents and thanks to the new functionality project E-mail, also the e-mails relative to the project.
- **Subscription to iCal:** WhoDoes 2.0 can interface with an agenda that is compatible with the protocol iCal, allowing the integration of the activities from the project with your personal agenda.

WhoDoes 2.0 is an application extremely flexible and able to adapt to needs of companies and of professionals, that have the necessity to plan and manage projects of different complexities, to be needed by private people that look for a rapid and intuitive application for the management of small activities daily.

New Version, new functionality... same prices!

WhoDoes 2.0 is available, other than in a completely free version, in [five new subscription plans](#) starting from 5,99 \$ a month.

The subscription plan Basic Management contains the new instrument "Fast Planning" the Basic communication provides the new functionality "Project E-mail" and in the Plus, Premium and Gold versions, both new features are included, a number of projects manageably at the same time is increased and disc space that can contain more files.

Further information is available on the new project website: <http://whodo.es>
